Title: Service Independent Playlist Creator

Description: Sharing playlists of music between a large group of people can be difficult when everyone doesn't listen to music through the same service. This will allow people to create playlists in a generic format that can then be integrated into the user's service of choice.

Actors: Music Enthusiasts (Users)

Functionality:

1. Users can create account
2. Users can create as many playlists as desired
3. Users can give a playlist a description
4. Users can search from a database of music to add
5. Users can share playlists with other users
6. Users can make playlists collaborative
7. Users can tag playlists (style, genre, etc)
8. Users can search others playlists by name
9. Users can search others playlists by tag
10. Users can import playlists into Spotify
11. Users can import playlists into Google Play Music
12. Users can import playlists into Tidal
